Native lobe pressure proxies and spherical stored-energy changes
C-HI
C-LO
G-HI
G-LO
Ratio to labelled bipolar input
Actual simulation age (Myr)
Stored change, R100
Stored change, R300
Global native lobe 2.5pV
Global native lobe 4pV
Grey: candidate inset-box conflict; hatching: domain-truncated selection.
Earlier points are not certified boundary-free. Moving-aperture storage is not energy closure.
